

Revised version of claim 7 and page 7, lines 40-44 of the English translation of JP2002-365782

[Claim 7]

A developer comprising:

a carrier comprising a surface cover layer formed of an acrylic resin and/or a silicone resin; and

the toner for developing the electrostatic latent image as described in any one of claims 1 through 6.

[Page 7, lines 40-44]

(7) A developer including:

a carrier including a surface layer formed of an acrylic resin and/or a silicone resin; and

the toner for developing the electrostatic latent image as described in any one of (1) through (6).

DECLARATION

I, Atsuko SANABE, the translator of the priority document Japanese Patent Application No. 2002-365782, declare that I committed translational errors in the translation because it is usual for us to use "at least one" instead of "and/or" in US applications, and I have revised the translation using "and/or" so as to be closer to the Japanese language. I do hereby certify that to the best of my knowledge and belief revised claim 7 and page 7, lines 40-44 attached herewith are true English translation of the corresponding parts of the Japanese Patent Application No. 2002-365782.

Signed, this 8th day of January, 2008

Atsuko Sanabe
